

COMPETITION DIRECTIVE

2023 – 02

This 2023 Competition Directive is recommended by the Rules and Competition Committee following discussions on June 19, 2023.

Technical Rule A.11.b) sets forth the maximum length of the flow meter and N2 sensor cable at 12 feet. Such number has been determined by the Committee to be arbitrary and does not fit the current conditions for equipment placement in several of the Boats. The Rules and Competition Committee recommends that the maximum length be increased to 15 feet for the 2023 Racing Season, and potentially beyond.

The maximum length of the flow meter and N2 sensor cable harness set forth in Technical Rule A.11.b) shall be increased to **15 feet**.

The H1 Board of Directors directs the Rules and Competition Committee to review such rule change at the end of the 2023 Racing Season and recommend to the Board whether such rule is a) necessary and/or b) if, necessary, if restricting the maximum length of such cable is the best way for the H1 Inspectors to police the perceived underlying problem, considering the 10 Principles for Rulemaking set forth in the Policies and Procedures – Rulemaking and Rule Changes - and such recommendation shall be considered for incorporation into the Technical Manual update for 2024.
